

RODEOSTOP® + KIT A1

The safest and most reliable automatic fall arrest device

Can also be fitted with a counterweight

Make sure the counterweight always holds the rope taut when the user's ascent

RODEOSTOP

AUTOMATIC FALL ARREST DEVICE WITH ENERGY ABSORBER

✓ Its pulley actuates the instantaneous blockage in the 2 directions in case of fall («back-and-forth operation»)

✓ If dropped, the device is equipped with a shock absorber to stop the user gently

✓ Using up to 35 meters depending on the length of rope

✓ Recommended rope: Semi-static Ø 10,5mm

✓ Great maneuverability (compact, lightweight ≈1kg)

✓ Maintenance is reduced to send for review each year (does not require lubrication)

✓ Norm EN360/2002 A.R.A.

KIT A1

PULLEY WITH SANDOW & ADJUSTING HOOK ON THE ROPE TENSION CHAIN

✓ Allows continuous and safe use because it limits the height of fall (no slack on the rope)

✓ A good adjustment of the tension of the vertical line with the hook on the chain down, makes the operation of the system very soft

MODÈLE	RÉFÉRENCE
RODEOSTOP	B100
KIT A1	K-A1

RODÉOPLUS

The belay device with integrated fall arrester

BELAY AND DESCENDER DEVICE FOR CLIMBING

- ✓ Incorporates an automatic braking and locking system, reducing the risks associated with human error and improper handling by the belayer.
- ✓ Classic use: one climber and one belayer.
- ✓ Simplifies belaying and gives instant control, suitable for young and novice climbers, with or without a harness for the belayer.

- ⊕ Lightweight and ergonomic
- ⊕ Durable materials, rust-proof and weatherproof weather
- ⊕ Standard 15151-1

Compatible rope: dynamic rope
EN 892 compliant, $\varnothing 10.2$ to 11mm
